

Panduan Akses Server Classroom

(Untuk Siswa)

Overview

Dokumen ini berisi informasi login, daftar port website, dan cara upload kodingan ke server classroom menggunakan VPS baru.

Informasi Server (Umum)

Gunakan detail ini untuk koneksi SSH, SFTP, dan konfigurasi database:

Item	Detail	Keterangan
IP Address	38.47.180.195	Alamat server VPS kita
SSH Port	22	Port untuk login terminal (PuTTY/CMD)
SSH User	root	Superuser (Hanya untuk Admin/Mentor)
SSH Password	(Tanya Mentor)	Jangan dishare ke luar kelas
Database Host	mysql	PENTING: Isi DB_HOST di .env Laravel dengan mysql
DB Username	root	Default user (Akses penuh)
DB Password	root_password_change_me	Default password (Ganti di .env)
PhpMyAdmin	http://38.47.180.195:8080	Manage database lewat browser

Daftar Port & Folder Siswa

Cari nama Anda di tabel ini untuk mengetahui di mana harus upload file dan alamat website Anda:

No	Nama	URL Website	Folder Project (Server)	Nama Database
1	Mentor	Link:8000	/var/www/classroom/projects/mentor	mentor
2	Student A	Link:8001	/var/www/classroom/projects/studentA	db_studentA
3	Student B	Link:8002	/var/www/classroom/projects/studentB	db_studentB
4	Student C	Link:8003	/var/www/classroom/projects/studentC	db_studentC
5	Student D	Link:8004	/var/www/classroom/projects/studentD	db_studentD
6	Student E	Link:8005	/var/www/classroom/projects/studentE	db_studentE
7	Student F	Link:8006	/var/www/classroom/projects/studentF	db_studentF
8	Student G	Link:8007	/var/www/classroom/projects/studentG	db_studentG
9	Student H	Link:8008	/var/www/classroom/projects/studentH	db_studentH

10	Student I	Link:8009	/var/www/classroom/projects/studentI	db_studentI
11	Student J	Link:8010	/var/www/classroom/projects/studentJ	db_studentJ
12	Testing	Link:8018	/var/www/classroom/projects/testing	db_testing

Cara Koneksi ke Server

Pengguna Windows

1. Buka CMD atau PowerShell.
2. Ketik: **ssh root@38.47.180.195**
3. Masukkan password saat diminta (ketikan password tidak akan muncul di layar, ketik saja lalu Enter).

Pengguna Mac / Linux

1. Buka Terminal.
2. Ketik: **ssh root@38.47.180.195**
3. Masukkan password saat diminta.

Cara Upload Project Laravel

Cara A: Upload Manual (FileZilla / WinSCP)

1. Buka aplikasi FileZilla.
2. Host: **38.47.180.195**, User: **root**, Port: **22**
3. Buka folder tujuan Anda di sebelah kanan (Server), misal: **/var/www/classroom/projects/studentA**
4. Drag & Drop semua file dari komputer Anda (Kiri) ke Server (Kanan).

Tips: Jangan upload folder vendor atau node_modules supaya cepat.

Cara B: Via Git (Disarankan)

Login ke server via SSH dan jalankan perintah berikut:

```
cd /var/www/classroom/projects/studentA # Ganti A dengan huruf Anda
rm -rf *.*?*
git clone https://github.com/username/project-anda.git .
# Jangan lupa tanda titik . di akhir perintah
```

Setup Awal Project (Wajib Dilakukan Sekali)

Setelah file ter-upload, Anda harus menginstall library dan setup database. **PENTING:** Jalankan perintah ini di Terminal Server (SSH) sebagai root dari folder **/var/www/classroom**.

Contoh untuk **Student A**. Ganti **studentA** dan **app_studentA** sesuai huruf Anda!

```
# 1. Pindah ke folder konfigurasi Docker
cd /var/www/classroom

# 2. Fix Permission (Sangat Penting! Agar tidak Crash)
chown -R 1001:1001 projects/studentA

# 3. Install Library (Composer)
```

```
docker compose run --rm --no-deps app_studentA composer install
```

```
# 4. Setup Environment (.env)
```

```
cp projects/studentA/.env.example projects/studentA/.env
```

```
docker compose run --rm --no-deps app_studentA php artisan key:generate
```

```
# 5. Connect Database (Migrate)
```

```
docker compose run --rm --no-deps app_studentA php artisan migrate
```

```
# 6. Nyalakan Container (Website siap!)
```

```
docker compose restart app_studentA
```

Troubleshooting (Masalah Umum)

Q: Container Restarting Terus menerus?

Biasanya karena 2 hal:

- Permission Salah: Belum menjalankan chown.
- Vendor Kosong: Belum menjalankan composer install.

Solusi (Jalankan dari folder /var/www/classroom):

```
# Fix Permission
chown -R 1001:1001 projects/studentA

# Fix Vendor
docker compose run --rm --no-deps app_studentA composer install

# Restart
docker compose restart app_studentA
```

Q: Website muncul 500 Server Error atau Blank Putih?

Ada 2 kemungkinan penyebab utama:

1. Masalah Permission (Paling Sering)

Jalankan ini agar Laravel bisa menulis log:

```
docker exec -it app_studentA chmod -R 777 storage bootstrap/cache
```

2. Masalah Config / APP_KEY Kosong

Jika cara di atas gagal, coba generate key ulang (Jalankan dari /var/www/classroom):

```
docker compose run --rm --no-deps app_studentA php artisan key:generate
docker compose run --rm --no-deps app_studentA php artisan optimize:clear
```

Q: Error Connection Refused di Database?

Cek file .env Anda:

Benar: DB_HOST=mysql

Salah: DB_HOST=127.0.0.1 atau localhost

Dokumen ini diperbarui untuk VPS baru (38.47.180.195) dengan format siswa huruf (A-J). Jika ada kendala, silakan hubungi Mentor.
